

At Cambridge Spark, we believe in taking proactive steps towards a sustainable future. Our commitment to achieving net zero emissions by 2030 for emissions scopes 2 and 3, along with maintaining zero emissions for scope 1, underscores our dedication to environmental stewardship.

This commitment, formalised by the board on 22nd of March, 2024, reflects our recognition of the urgent need to address climate change and minimise our carbon footprint. We understand that transitioning to a net zero economy requires concerted efforts across all sectors, and we are proud to play our part in driving meaningful change.

We have just started on our journey to measuring our specific scope 2 and 3 emissions and are working towards reporting and improving both our emissions and our sustainable impact upon the world.

By embracing renewable energy sources, optimising our operations, and fostering a culture of sustainability, we aim to not only reduce our environmental impact but also inspire others to join us in this crucial journey towards a greener, more sustainable world.
